Notification definitions specify an event about which you can be notified by Docusnap via email. This could be an expiring contract that you have entered in the additional information, or if a certain software was found during inventory.

The current notification definition checks **if an underlicensing has been detected in Docusnap**. The results of the inventory carried out are checked for specific results.

```
select CURRENT_TIMESTAMP AS 'Date',
'Underlicensing detected. Please check the inventoried systems and your AD size in Docusnap.
You can find a HowTo for more information in our Knowledge Base:
https://media.docusnap.com/media/doc/howto/Docusnap_License-exceeded_EN.pdf' AS 'Description'

from tSnapShotObjects
inner join tSnapShots on tSnapShotObjects.SnapShotID = tSnapShots.SnapShotID
inner join tSysSchedules on tSnapShots.JobID = tSysSchedules.JobDefID
inner join tDomains on tSnapShots.DomainID = tDomains.DomainID
inner join tAccounts on tDomains.AccountID = tAccounts.AccountID

where tSnapShotObjects.MessageID IN (413,414,415,418,424,425)
and ScanDate > CURRENT_TIMESTAMP - 1

Group By tSnapShotObjects.MessageID
```

We recommend running the corresponding report daily. If underlicensing is detected, an email will be sent with an attached Excel file.

For more information on notification definition and setting up the notification, please refer to the corresponding HowTo Defining Notifications (docusnap.com).

In the following HowTo, you will find more information regarding underlicensing and how it can be resolved: License Exeeded (docusnap.com).
